

BROKEN OAK RANCH

INTRODUCES OUR NEW GENERATION HERD SIRE

BOR BLACK TOM

POLLED - PEDIGREE - PERFORMANCE - MUSCLE - SOUNDNESS - BLACK

For Sale:

Two Breeding Shares each with 100 straws - his semen is excellent!

Call the Ranch for details.

THE RESULTS ARE IN! We have mentioned *Black Tom* several times in the past, but have been relatively quiet about him until we had the chance to evaluate and performance test his progeny. The wait is over! His progeny are out of the weaning pen and have completed their yearling test phase.

Black Tom is a COMPLETE package:

1. His females in our replacement heifers are all stand outs
2. His bulls are the first ones picked by our commercial buyers; several would have made excellent herd sires for many registered breeders, but are now in service with our commercial customers
3. His progeny average 106% weaning ratio and 100% yearling ratio (in contemporary groups of 75 or more)
4. His progeny are some of our best for ultrasound data
5. Tested homozygous polled, tested albinism clean, and is DNA verified
6. Thus far, the data would strongly suggest that he has the ability to increase pelvic area (important for calving ease)

Thanks:

To Flying I and the Zulim family for selecting *Black Tom* progeny for their show strings!
To Hampton Braunvieh for their confidence in our breeding program by using BOR genetics in their herd and for letting Broken Oak Ranch incorporate some of their top genetics in our program!
